Keywords: transfer domain, authorization

Summary: Your domain transfer will not succeed unless you unlock the domain, remove privacy, set up a valid administrative email, and apply the correct authorization code(for .com, .net, .org, .biz, .us, or .info names).

Your domain transfer will not succeed unless you unlock the domain, remove privacy, set up a valid administrative email, and apply the correct authorization code(for .com, .net, .org, .biz, .us, or .info names). To Authorize a Domain Transfer to Your Account Log in to your [Account Manager](#). From the Domain Names menu, select **Manage Domains**. The Domain Control Center opens. In your folder list, click **Pending Transfers**. Click the **Authorization** button and select **Begin Transfer Authorization** from the list. The Authorization button is located in the right corner of the toolbar. In the **Transfer Authorization** section, enter your **Transaction ID** and **Security Code** from the email notification you received regarding this transfer and click **Continue**. If applicable, enter your **Authorization Code** that you received from the current Registrar and click **Continue**. For more information about authorization codes, see [What is my Auth Code or Authorization Code?](#).
