Keywords: Plesk Linux dedicated server

Yes. You can recover your Plesk password on your Linux dedicated server. To Recover Your Plesk Password on a Linux Server Using SSH, log in to your server with the User ID and Password that you created when you set up your dedicated hosting account. At the command line, type `su -`. For your password, use the same password that you use with your User ID. Type `cat /etc/psa/.psa.shadow`. This file contains your admin Plesk password.
