Keywords: dedicated Linux server Plesk 8.0

If you have a Fedora 2 dedicated Linux server, you can upgrade to Plesk 8.0 and begin using the enhanced features of the control panel interface. **NOTE:** This upgrade is **NOT** recommended. There are issues with upgrading a Fedora 2 account to Plesk 8.0.*. If you perform this upgrade the new system will **NOT** be supported. **NOTE:** This process can take up to 30 minutes to complete. When the installation is complete, you need to acquire a new Plesk key from our customer support. To Upgrade Your Linux Dedicated Server to Plesk 8.0 Log in to your server using SSH. Type this command to download the Plesk 8.0 Auto Installer: `wget http://download1.swsoft.com/Plesk/Plesk8.0/FedoraC2/psa_installer_v3.0.2_build060704.16_os_FedoraCore_2_i386` Type this command to change the permissions for this file: `chmod 755 psa_installer_v3.0.2_build060704.16_os_FedoraCore_2_i386` Type this command to execute the file: `./psa_installer_v3.0.2_build060704.16_os_FedoraCore_2_i386` On the **Welcome to the Plesk Installer** page, type **n** to go to the next page. On the **Select Plesk Software Source** page, type **n** to go to the next page. On the **HTTP Proxy Setup** page, type **n** to select the defaults and go to the next page. This tells the updater that you are not using an HTTP Proxy. On the **Plesk Release Selecting** page, press **3** to select **Plesk 8.0.1.**, then type **n** to go to the next page. Your current version is confirmed, and the installer asks if you want to upgrade now. Type **y** to confirm the upgrade. On the **Installation Type** page, type **n** to upgrade the default components. This can take a few minutes to process as Plesk inspects the installed packages. The **Check for Free Space** page displays the amount of space required for the upgrade and the remaining space on the account. If the space required is less than the space available, type **n** to go to the next page. On the **Preparing System for Plesk Installation** page displays the additional packages that you need to install. Type **n** to go to the next page. Plesk will begin to download and install the necessary files. When the install is complete, contact customer support for a new Plesk key.
