Keywords: Dedicated Hosting Manager

If, at any time, you want to revert to a clean setup on your dedicated server, you can reprovision your server. **Reprovisioning erases all of the content on your server hard drive.** Your server will return to the state it was in when you first purchased it. You can reprovision your server using the Dedicated Hosting Manager. Log in to your [Account Manager](#). In the **My Products** section, select **Dedicated/Virtual Dedicated Servers**. Click **Launch Manager** next to the dedicated or virtual dedicated server you want to upgrade. The Dedicated Hosting Manager opens. In the **Support** section, click **Reprovision Server**. The **Reprovision Server** page opens. If you choose to, enter a new hostname and username. These values are defaulted to the current hostname and username for this account. Enter and confirm a new password and then click **Submit**. You will receive a confirmation notice once your server is reprovisioned and ready to go. **NOTE:** Typically, your server will be ready in less than five hours. However, if you have a RAID card or hardware firewall, it may take up to 24 hours before your server is ready.
