Keywords: FTP Backup server

You can access your FTP backup server from your dedicated server using any standard FTP client. For dedicated Linux servers, you can use gnuftp. For Windows, FileZilla is an easy-to-use, free FTP client. To connect to your FTP Backup server, use the user name and password that you set up when you purchased your FTP Backup account. You can find the IP address for your FTP Backup server in the FTP section of your Dedicated Hosting Manager. **NOTE:** We only allow internal connections to our FTP Backup servers. This means that you must use your dedicated server to connect to your FTP Backup server.
