Keywords: FTP Backup Service

You can back up data using our FTP Backup Service, and save the data to a sub-folder. To Create a Backup Sub-folder From your dedicated server, FTP to the backup server using any FTP client. Create your subfolder directory. Enter the directory as your location when you set up the FTP Backup Service. **WARNING:** You can only FTP to the FTP Backup from your server. It will not connect from another location. For more information about our FTP Backup feature, see [What is FTP Backup?](#) For details on how to access the FTP Backup server, see [How can I access the FTP Backup server for my Linux virtual dedicated server?](#)
