Keywords: mailing list domain

To Create a Mailing List for Your Domain Log into Simple Control Panel. For more information as to how to do this, see [How do I access my Dedicated Server using Simple Control Panel?](#) Click the **Mailing Lists** icon.

The Mailing List Configuration - Setup page displays. In the **Mailing List Configuration - Domains** area, click the **Edit** button for the domain you want to create a mailing list for. If you are unsure which button is the Edit button, hover your mouse cursor over the buttons to the right of the domain name to view the tool tips for each button.

If there are no domain names listed, you need to add a domain before you can set up a mailing list for it. For more information see, [Adding Domains to the Email Configuration](#). Click **Add New List**. In the **Mailing list name** field, type a name for the mailing list. In the **Owner email address** field, type the email address of the mailing list owner. In the **Password** and **Password (again)** fields, type a password for the mailing list. Click **Save**.
