Keywords: Dedicated Hosting Manager

You can use the Dedicated Hosting Manager — available through the Dedicated/Virtual Dedicated Servers section of your account-management interface — to perform your basic account management, including account setup and monitoring of bandwidth usage. The manager also allows you to request a power cycle of your server and to submit trouble tickets for problems related to your dedicated server. To Access your Dedicated Hosting ManagerLog in to your Account Manager. From the **Hosting and Email** list, select **Dedicated/Virtual Dedicated Servers**. Click **Launch Manager** next to the dedicated server account that you would like to manage. The Dedicated Hosting Manager opens in a new window. For information on how to log in to your server to perform more advanced management tasks, see: [How do I access my Linux dedicated server using SSH?](#)
[How do I access the Plesk control panel on my dedicated server?](#)
