Keywords: Plesk Control Panel service

If your Plesk Control Panel service is not running under the Local System account log on, it will not start correctly. To Set Your Plesk Control Panel Service Log On Account Log in to your server through a Remote Desktop Connection. See [Accessing Your Virtual Dedicated Server using Remote Desktop Connection](#) or [Accessing Your Windows Dedicated Server using Remote Desktop Connection](#). From the **Start** menu of your hosting server, select **Administrative Tools --> Services**. In the list of services, right-click on **PleskControlPanel**, and then select **Properties**. Click the **Log On** tab. Click the **Local System account** option button. Click **OK**. In the list of services, right-click on **PleskControlPanel**, and then select **Start**.
