Keywords: Plesk FTP WWW servers DNS

This process updates Plesk database records, modifies network adapters settings, reconfigures FTP and WWW servers, and updates DNS records. To Change Server IP Addresses Remote desktop onto your hosting server. Run **Plesk Reconfigurator**. Select **Change Server IP Addresses**. In the window, select the IP addresses to change. To map to a new IP address: Select **Create New IP Address**. Enter **IP Address** and **Network Mask**. Select the appropriate **Network Interface Name**. To map to an existing IP address: Select **Map to Existing IP Address** Select the appropriate address. Click **Next**. **NOTE:** IP address allocation is monitored. Attempting to add IP addresses to your server that have not been purchased is a violation of your terms of service agreement and may result in the suspension of your account.
