Keywords: Cisco PIX 501 Hardware Firewall

When Plesk is used in conjunction with the Cisco PIX 501 hardware firewall, two processes may be affected: the external resolution of domains while running DNS and the mapping of domain IP addresses through the firewall. To ensure DNS compatibility between your Cisco PIX 501 hardware firewall and Plesk control panel, see [Plesk DNS Configuration](#). Web Sites When the Cisco PIX 501 hardware firewall is added to a network, the firewall inherits the public IP addresses of the domains and the domains are assigned new, private IP addresses. To reconfigure domains to their new address through Plesk, see the following: Windows [Plesk Windows IP Address Configuration With Cisco PIX 501 Hardware Firewall](#) Linux [Plesk Linux IP Address Configuration With Cisco PIX 501 Hardware Firewall](#)
