Keywords: SSL certificate

If you have purchased an SSL certificate for your Web site, you can add a SSL site seal image to a web page. The SSL site seal option will only display if you have purchased an SSL certificate for your site. To Add an SSL Site Seal image to Your Web Page From the **Design** menu, click **Page Designer**. If necessary, from the **Select Page** list, select the page you want to edit. Click the block you want to edit. Blocks are outlined in blue. Position your cursor where you want to add your certificate image. From the Toolbox, select **Tables & Objects**. From **Tables & Objects**, move your mouse over Insert Object, then select **Site Seal**. The image is added to the content block. To Delete an SSL Site Seal Image from Your Web Page From the **Design** menu, click **Page Designer**. If necessary, from the **Select Page** list, select the page you want to edit. Click the block containing the seal. Blocks are outlined in blue. Click on the image you want to delete. Press **Delete** on your keyboard.
