Keywords: Photo Montage

With the Montage feature in Online Photo Filer, you can create a custom slideshow presentation. You can arrange your selected photos in any sequence, select transitions between photos, and even add a music track. **Note:** The photos you add to your montage must be from public galleries. You can't add photos from private or password protected galleries. To Create a Photo Montage From your Home page, go to the Montage tab. Click **Create Montage**. Enter a title for your Montage. Click **Create**. You can add photos to your montage using either of the following methods: **Drag and Drop** Click on the photo you want to add and, while holding down your mouse button, drag the image to the main screen on the left and release your mouse button. **Add Photos** Select the photos you want to add and click Add Photos. If you want to add a music track to your montage, go to the Add Music tab and select a style from the list. If you want to edit the title of your montage, go to the Settings tab and enter the new title. To save your montage, click **Save**. If you want to clear your photos and begin again, click **Clear Photos**. To Apply Transitions Between Photos in Your Montage To add a transition between photos, select the transitions icon below the photo you want the transition to display after. Select a transition and click **apply**. To apply a transition to all photos, select the transition icon, click **Apply to Photos**, then click **Apply**.
