Keywords: Online File Folder account

Web Folders (WebDAV) allow you to access your Online File Folder account through your Microsoft Windows Explorer. You can copy, rename, and move files inside your account, or even move files to and from your hard drive. Furthermore, once you have set up your Web Folder, you can open your Windows Explorer, and your Online File Folder account will display as a folder under My Network Places. You can create a Folder Link to your Online File Folder no matter what browser you are using. For information on creating a Folder Link using Internet Explorer, see [Creating a Network or Web Folder Link to Online File Folder in Windows Explorer](#). For other browsers, see [Creating a Network Folder Link in Other Browsers](#).
