Keywords: Quick Shopping Cart

Quick Shopping Cart supports a number of different payment methods, including credit cards, PayPal, personal checks, cash, purchase orders, and cash on delivery (COD). Credit card processing is supported through online processing (through a payment gateway), as well as point of sale (POS) processing through your existing processing account. **NOTE:** Current credit card regulations do not allow us to store the Card Verification Value (CVV) codes with credit card information in our database for use with Point of Sale transactions. For more information, see [Why can't I capture the CVV code for credit cards for Point of Sale transactions?](#). When customers use a credit card to purchase items from your store, payments are pre-authorized. You must manually accept the payment from the Order detail screen by clicking **Capture Funds**. Quick Shopping Cart supports the following payment gateways: Quickbooks Merchant Service Innovative Merchant Solutions Authorize.Net FAST TRANSACT®/VeloCT
