Keywords: QuickBooks Web Connector

HRESULT = 429: ActiveX component can't create object, RegisterQBWebConnector. **Solution:** This error can be safely ignored. Click **OK** to get past the error. **Error 1706:** No valid source could be found for product QuickBooks Web Connector. The Windows Installer cannot continue. **Solution:** The Web connector installation file is corrupted. You need to delete the QBWebConnectorInstaller.exe file and perform the download again. **QBWC1033:** QBWebConnector was unable to initialize QWCLog.txt file. Exception: Requested registry access is not allowed. **Solution:** The Web Connector needs permission to write to the registry to store Web connector and Web service related information that it reads later to operate. You need to grant the user account of the person who is installing the Web Connector write access to the following registry:
HKEY_CURRENT_USER\Software\Intuit **Error: 0x8004041C** - An internal QuickBooks error occurred while trying to access the QuickBooks company data file. **Solution 1:** It is possible that there is a problem with your QuickBooks Company file. The first thing you should do is verify that your company file is intact by selecting **File -> Utilities -> Verify Data**. If there is a problem with your company file, select **File -> Utilities -> Rebuild Data** to try to correct the issue. **Solution 2:** If the first solution does not correct your problem, the Web connector installation file is corrupted. You need to delete the QBWebConnectorInstaller.exe file and perform the download again. You will need to close QuickBooks and the Web Connector. Once you are sure they are not running, you can download the file and continue from there.
