Keywords: MySQL

Quick Shopping Cart uses MySQL, which uses "Stopwords", to compile product databases. Stopwords are words that are common to the point that they have little or no meaning by themselves. Therefore, when a search is performed against any of these words, no results are returned. The search function in Quick Shopping Cart may return a null result even though the word does exist in the product description. The default list of stopwords is located on the [MySQL Full-Text Stopwords](#) page.
