Keywords: QuickBooks

The QuickBooks integration has two components: Support for processing credit card transactions using the QuickBooks Merchant Service payment gateway, where available. Quick Shopping Cart Web Services that allow QuickBooks to download receipt information into QuickBooks. This feature enables the QuickBooks credit card reconciliation feature to incorporate transactions processed through Quick Shopping Cart. NOTE: Full Web Services integration is available only to merchants who use QuickBooks Merchant Service as their payment gateway. If you are not using QuickBooks Merchant Service, you can use Quick Shopping Cart Web Service to send receipts to QuickBooks. However, the receipts will not be integrated into the QuickBooks Merchant Service functionality that allows credit card reconciliation within QuickBooks. For more information on using QuickBooks, refer to the [QuickBooks Quick Start Guide](#).
