Keywords: Business Registration

Summary: A Business Registration contains two types of information: mandatory information that is a matter of public record (i.e., domain name contact information) and must be displayed, and optional information you can add to enhance your business listing.

To Show/Hide Optional Business Information

1. Log in to your Account Manager.
2. From the Domain Names drop-down list, select Business Registration.
3. Next to the Business Registration account to modify, click Manage Account.
4. In the menu bar at the top of the page, click Settings.
5. The categories of optional information are: Domain Name Aftermarket, Alexa, and Traffic Trend. To display a particular category in your listing, expand the section you want to include and select Show this on my Whois page. To remove the category, deselect the Show option.

NOTE: If data is not available for a category, the checkbox will not be enabled.
