Keywords: streaming video

No, our shared hosting accounts do not support streaming video. Streaming video is content that people watch as it downloads to their computers. They don't have to wait for the entire video to download to start watching it. If you want to include video on your Web site, consider embedding a video file such as an .mpg or .avi into your Web page. Although it will not be streaming video, you can make the file available for people to download and watch.
