Keywords: Deluxe Premium plans multiple domains

It is possible to host multiple domains from a single hosting account. Deluxe and Premium plans can point multiple domains to any content subdirectory. For example, if you have a Deluxe or Premium plan hosting "example.com," you can add the domain name "anotherexample.com" and point it to the content directory "/another" off the hosting account root. Visitors browsing to "anotherexample.com" will arrive at "example.com/another."To Add Multiple DomainsLog in to your [Account Manager](#). In the **My Products** section, select **Hosting Account List**. Next to the hosting account you want to modify, click **Open**. In the **Settings** section of the Hosting Control Center, click the **Domain Management** icon. From the **Domain** drop-down list, select a domain in your shopper account or type a domain name that does not exist in your account. From the **Domain Hosting Path** drop-down list, select an existing content directory or type a new content directory that does not appear in the list. **NOTE:** This step applies only to Deluxe and Premium hosting plans.Click **Add Domain**.
