Keywords: File Manager

The File Manager, located in the Hosting Control Center, allows you to manage the files and directories within your Web site directory. Specifically, this tool allows you to copy, move, rename, and delete both files and directories; upload and download files; and sort all items within the File Manager list. Additionally, the File Manager includes a Filmstrip feature that allows you to view all images within a directory. For more information on actions you can perform in the File Manager, see the [articles relating to the File Manager](#).
