Keywords: Plesk license

Using Plesk, you can add a domain to your dedicated or virtual dedicated server. In order to add domain names, you will need to have a Plesk license that allows you to create multiple domains. To Add a New Domain in Plesk Log in to Plesk as admin. Select **Domains**. Click **Add New Domain**. The client selection page displays. Select the client you want to create the domain for, and click **OK**. The domain creation page displays. In the Domain name field - enter a valid domain name (e.g., domainnamegoeshere.com). If you enter a domain name that already exists, Plesk will ask you to change it. Select the IP address that will be used to host this domain from the drop-down list. If you want to set up hosting for this domain, check the "Proceed to hosting setup" check box. Click **OK**. For more information about setting up a domain in Plesk, you can take a look at the Plesk documentation on SWsoft's Web site: [Administering Domains](#)  
[Creating a New Domain](#)
